

the
Methods of Science
RAP

Science is my thing today.

When you do science – here's the way:

First ask **questions** – why or how?

Then **hypothesize** – do it now!

Experimentation is next in line.

You get results that are **SO** fine!

Analyzing data comes up next.

Then **graph** your data, to show it best.

Being a scientist – it's a trip!

It's not square – it's really hip!
